S331L SITE MASTER IS SPLASH RESISTANT

### Rugged, dust, and splash resistant. Reliable, lightweight and portable.

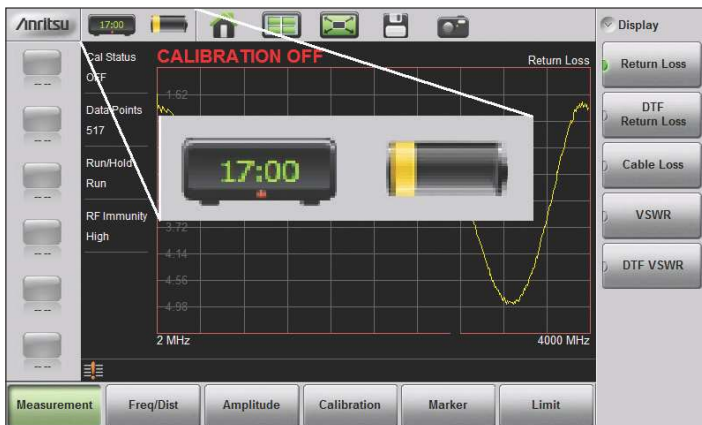

Site Master S331L is rugged, dust and splash resistant, reliable, field proven and always ready, even if you're not. At under 2.0kg (4.4lbs) including battery, it's effortless to carry whether you are on level ground, climbing a large tower, or heading through a roof hatch, your Site Master easily goes along with you.

STARTING OUT FULLY CHARGED AT 9:00 AM

### Beginning of a traditional workday

With the battery fully charged, you're ready for a full workday of measurements. This is the longest lasting Site Master operation time we've ever offered in a handheld cable and antenna analyzer. You won't need to look for outlets and drag power supplies with you from site to site anymore. Now you can focus on what matters, making measurements and getting the job completed.

ALL DAY ON BATTERY AND STILL RUNNING AT 5 PM

### 8 hours later, still running and still measuring

After 8 continuous hours of battery operation, the Site Master S331L is still measuring. We understand that 8 continuous hours is an unlikely scenario, but we are proud of the S331L's extended battery life and feel it deserves to be recognized.

The S331L also has intelligent power saving features to extend the operating time further, providing as much as 10 hours of operation.

Features like sleep mode with instant on, handy for travelling between sites, and auto-display brightness that will reduce the screen backlight automatically if the instrument has not been accessed for some time. One touch of the screen, keypad, or twiddle-knob will automatically restore brightness levels.

CONVENIENT MULTIPLE USB PORTS

#### Multiple USB ports

The Site Master S331L comes with two USB type A ports and one USB type mini B port. This allows for a quick and convenient file transfer, memory expansion, or you can add an external mouse or keyboard to enhance usability. You can even charge your cellphone in case it happens to run out of battery power.

INSTACAL™/POWER METER MODULE

#### Field replaceable module

We know accidents can happen out there, so we developed a field replaceable module solution to save valuable time and money, allowing you to keep your productivity up. If a user accidentally damages the Power Meter module by putting too much power into it, simply contact Anritsu and we will send you a replacement exchange module\* that simply plugs into the dedicated slot and is held in with 4 screws. There's no need to return your instrument, no need to recalibrate the instrument, (calibration factors are stored within each module) and most importantly, down time is reduced to the absolute minimum. Order a spare module for your field kits and your downtime in the event of an accident is essentially zero.

EASY TO SEE BACKLIT KEYS

#### LED Backlit Keypad

The LED backlit keypad allows for operation in dimly lit environments. Whether it's the winter season, or you are just working late into the evening, you'll be able to see the keypad without any strain. You'll know exactly what key you are pressing so you can complete your measurements more efficiently.

\*Charges may apply. Exchange module pricing is based on defective core returned to Anritsu. Contact Anritsu for more details.

BUILT IN POWER METER MEASUREMENT SCREEN

### Internal Power Meter

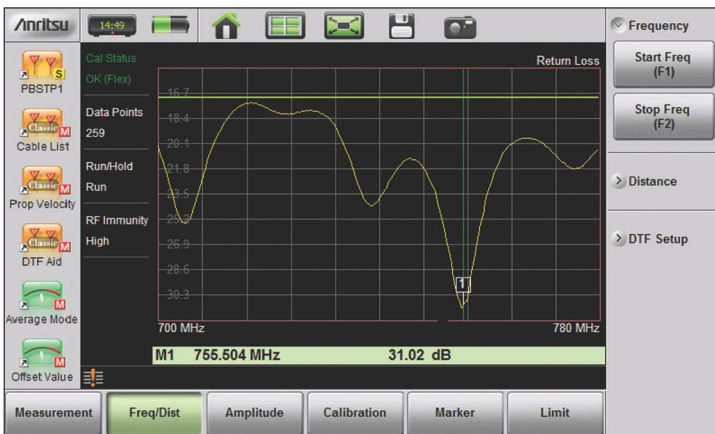

The Site Master S331L includes a convenient, easy to use, built in power meter. Setting the transmitter output power of a base station properly is critical to the overall operation of wireless networks. A very small change in power levels can create a large change in actual coverage area, resulting in dropped calls and low data rates.

CLASSIC MODE CAN REDUCE OR ELIMINATE TRAINING FOR EXPERIENCED SITE MASTER USERS.

### Classic Mode

The Site Master S331L offers a convenient Classic Mode that's easy to use. If you have used the Site Master D series model, or even older Site Master models, you'll find this Classic Mode familiar and easy to use. We didn't keep all of the D characteristics though, Classic Mode allows you to use the convenient popup keyboard for saving data. Complex filenames are no longer limited to 16 characters, there's plenty of characters available to suit any filenames you might require.

ADVANCED MODE CONTAINS SEVERAL POWERFUL NEW FEATURES NOT AVAILABLE IN CLASSIC MODE.

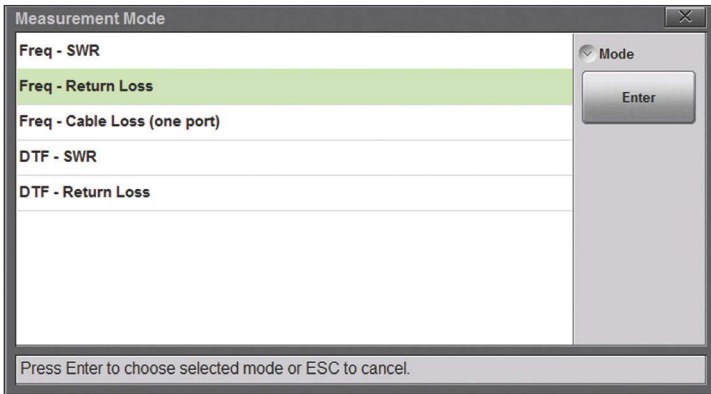

### Advanced Mode

The Site Master S331L also offers a mode with more capability, we call it Advanced Mode. Advanced Mode has a much more modern look and feel to it, and many users will immediately appreciate the new Advanced Mode GUI and button layout/function. With Advanced Mode you also get some extra capabilities such as 8 markers instead of 6. There are 6 customizable touch screen icons for quick recalling of regularly used setups, making operation easier and more efficient.

CLASSIC MODE SELECTOR SCREEN. SAME FAMILIAR LAYOUT AS D MODELS.

DTF AID PARAMETER SCREEN. SAME FAMILIAR LAYOUT AS D MODELS.

DISTANCE-TO-FAULT (DTF) MEASUREMENT SCREEN.

### Classic Mode Measurement Selector Screen

The Site Master S331L classic mode was developed based on customer feedback. Many of our loyal customers have asked us to create an easy to use GUI like the one they have become accustomed to on the Site Master D models. The result of that valuable feedback is what we are proud to announce as Classic Mode.

### Classic Mode Distance-to-Fault Aid Menu Screen

DTF Aid screen contains the same options in a similar layout format as the Site Master D models. Former Site Master D model users should have no difficulty setting DTF parameters in Classic Mode. We've even added some useful hints to help optimize the settings.

### Classic Mode Distance-to-Fault Measurement

Here is an example of the Classic Mode Distance-to-Fault (DTF) measurement screen. Notice the Distance menu buttons labeled "D1" and "D2" just as they are in the D models.

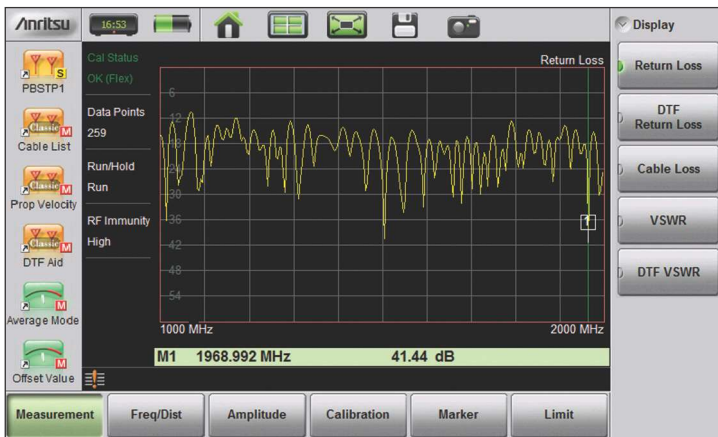

These changes allow users experienced with older Site Master models to become immediately productive with the new S331L. Saves training costs and downtime.

EASIER ACCESS TO DESIRED MEASUREMENT TYPES IN ADVANCED MODE

### Advanced Mode Measurement Selector Screen

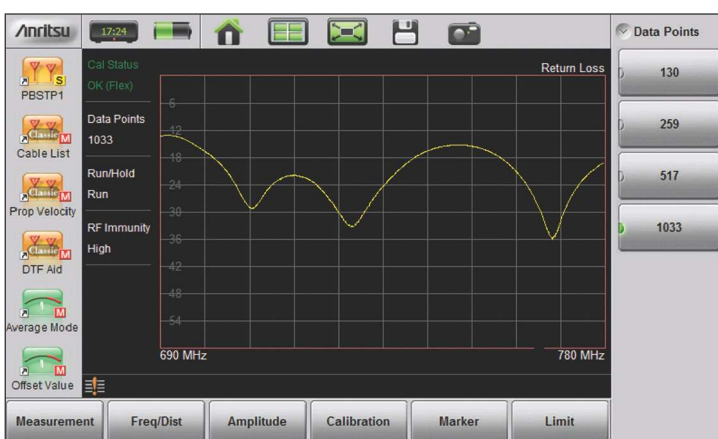

In Advanced Mode, users no longer need to press the Mode key before selecting desired measurement. Users are now able to select the desired measurement directly, simply by pressing the primary menu key “Measurement” then choose the desired measurement from the secondary menu keys on the right side.

8 MARKERS IN ADVANCED MODE PROVIDES MORE FLEXIBILITY

### More Markers in Advanced Mode

In Advanced Mode you have 8 markers available to you. That’s 2 additional markers which can be used as you wish, either as additional regular markers, additional delta markers, or additional bounded markers. Provides more flexibility than Classic Mode.

WITH 1033 DATAPOINTS YOU CAN EXTEND THE MAXIMUM DISTANCE-TO-FAULT RANGE EASILY

### 2065 Datapoints

You have up to 2065 datapoints available for use. Increased datapoints can be used to provide better frequency resolution for your VSWR/RL measurements, or they can be used to extend the maximum distance range for your Distance-to-Fault (DTF) measurements without sacrificing distance resolution. A handy feature at your fingertips.

A large built-in popup keyboard saves valuable time in the field when entering trace names. For Cable and Antenna Analysis, an EZ Name Matrix can be customized for quickly naming your line sweeps

**BUTTONS ARE LARGE, EASY TO SEE AND PRESS. MAKES FILE SAVING EASIER THAN EVER.**

#### EZ Name Quick Naming Matrix saves valuable time

Unique to Anritsu, the customizable EZ Name Quick Naming Matrix saves valuable time. Users can preset up to 36 commonly used names. The resulting time saved is immediately beneficial. Save file names labeled with Site ID, Sector, Color Code, Measurement type, Termination and Frequency in less than 5 seconds. RETURN LOSS MEASUREMENT SCREEN (ADVANCED MODE)

### Return Loss/VSWR Measurement

Poor Return Loss/VSWR can damage transmitters, reduce the coverage area, increase dropped and blocked calls, and lower data rates.

CABLE LOSS MEASUREMENT SCREEN (ADVANCED MODE)

### Cable Loss Measurement

This an important commissioning check. Excessive loss reduces the coverage area and can mask return loss issues, creating false good readings later.

DISTANCE-TO-FAULT MEASUREMENT SCREEN (ADVANCED MODE)

### Distance-to-Fault (DTF) Measurement

DTF can be used to identify and precisely locate faulty cables, components, or connector pairs with poor Return Loss/VSWR in meters or feet. Use 1033 points in Advanced mode to get more maximum distance without sacrificing resolution.

UPPER/LOWER LIMITS AND SEGMENTED LIMIT LINES SCREEN (ADVANCED MODE ONLY)

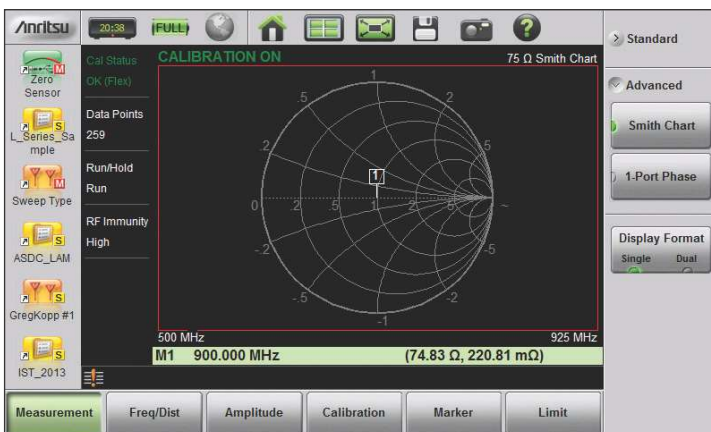

### Feature additions/enhancements (Advanced Mode Only):

Upper/lower limits and segmented limit lines are now available. Up to 42 segments for both upper and lower limits may be created (84 segments total).

MARKER PEAK/VALLEY TRACKING SCREEN (ADVANCED MODE ONLY)

Marker peak/valley tracking. This allows users to have the marker automatically track either the peak or valley response of a measurement, which is very useful when tuning devices.

SMITH CHART 50/75 Ω SELECTABLE SCREEN (ADVANCED MODE ONLY)

Smith Chart (50/75 Ω selectable) has been added as an advanced measurement type. 75 Ω Smith Chart measurements are shown.

1-PORT PHASE MOVEMENT SCREEN (ADVANCED MODE ONLY)

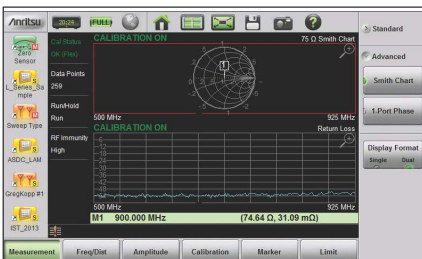

### Feature additions/enhancements (Advanced Mode Only):

1-Port phase measurement has been added as an advanced measurement type.

EXTERNAL SENSOR TRANSMISSION MEASUREMENT

To make more accurate cable loss measurements, especially for cables with more than 10 dB of loss, you can use the Transmission measurement with External Sensor.

DUAL SCREEN SPLIT HORIZONTALLY SCREEN (ADVANCED MODE ONLY)

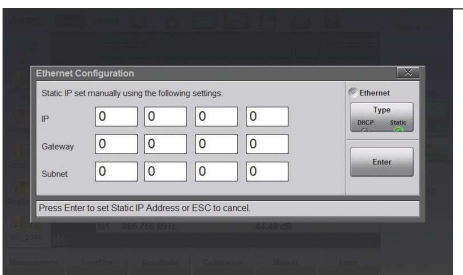

Dual screen (split horizontally) has been added as an advanced measurement feature. Users may select any of the available measurement types when in dual screen mode.

VIP (VIDEO INSPECTION PROBE)

Dirt or damaged optical connectors can greatly effect network performance. Scratches, chips and contamination on optical fiber connector end faces reduce transmission quality and increase errors. This leads to additional I&M work and cost.

The G0306B Video Inspection Probe can reduce these issues by verifying the condition and cleanliness of connector end faces during the installation phase. The connector image and detailed PASS/FAIL status is displayed as defined by IEC 61300-3-35 ensuring quality and consistency from connector to connector, technician to technician.

DHCP AND STATIC IP SCREEN (ADVANCED MODE ONLY)

DHCP and Static IP settings are now in the System menu. With the new 2000-1810-R USB to Ethernet LAN adapter, units are now able to be connected to via Ethernet.

### The Anritsu Tool Box

The Anritsu Tool Box (included on disc or freely downloadable at [www.anritsu.com](http://www.anritsu.com)) is a convenient central location where Anritsu supporting software programs and online support options can be found for most of our handheld product portfolio. Simply choose the desired application that suits your needs. The Anritsu Tool Box comes with LST and grows as more Anritsu tool box programs are added.

### Marker and Limit Line Presets

Presets make applying markers and a limit line to similar traces quick and easy. They only need to be set once, and recorded. After this, applying them to a similar trace requires only one button push. This speeds up trace processing and makes providing consistent marker and limit line settings easy.

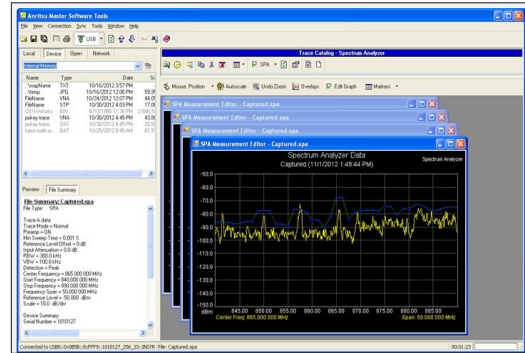

### Naming Grid

A naming grid function makes changing file names, trace titles, and trace subtitles from field values to those required by contract simple and quick. Once the naming grid is populated with user defined file name segments, a few simple button presses will then fill out the file, title, and sub-title names. Quickly applied to multiple traces, the naming grid can save time, increase efficiency and accuracy.

### Report Generator

The report generator will create a professional PDF or HTML based report. Reports includes GPS<sup>1</sup>, power level<sup>1</sup>, company logo<sup>2</sup>, instrument and calibration status along with a display of all open traces. It also may contain additional information such as addresses and phone numbers. HTML type reports may be post edited using programs such as Microsoft Word.

Line Sweep Tools (LST) is a free PC based program that increases productivity for people who deal with numerous Cable and Antenna traces every day. LST is the next generation of Anritsu's familiar Handheld Software Tools (HHST) and shares its user interface, giving a new face to the term "ease of use."
